The B&D Industrial Story

B&D Industrial, established in 1947 by John D. Nations as Bearings and Drives, Inc., began its journey in the southeast, focusing on the distribution of industrial products. Over the years, the company expanded offerings to include services such as industrial gearbox repair and fabrication, catering to the needs of the industrial sector.

Mechanical Services

As it grew, B&D Industrial broadened its geographical footprint beyond Georgia, extending its services into Florida, South Carolina, North Carolina, Tennessee, Louisiana and Washington. This expansion was accompanied by a strategic move into the Industrial Internet of Things (IIOT) sector, where the company started monitoring machine condition and process efficiency, enhancing its value to the industrial sector.

Further solidifying its leadership in the industry, B&D Industrial ventured into gear manufacturing by acquiring American Gear & Engineering in Westland, Michigan. This acquisition marked a significant expansion of capabilities and services.

Today, B&D Industrial continues to maintain a sharp focus on serving the industrial sector, constantly evolving and adapting to meet the complex demands of our customers while staying true to our roots established over seven decades ago.

ELECTRICAL AUTOMATION

High-quality components for advanced electrical automation needs.

FIELD SERVICES

Responsive call-out services for emergency breakdowns, installation, removal, or maintenance of industrial equipment.

GEAR BOX SERVICES

Expert industrial gear box maintenance, rebuilds, inspections, and installation services.

GEAR MANUFACTURING

Specialized in fully custom gear and rack manufacturing for all types of gearing.

EXPLORE OUR OFFERINGS:

INDUSTRIAL CONTROL PANELS

Customized control panel products and design services for diverse industrial applications.

MACHINE & FABRICATION SERVICES

Precision part replication, modification, and experienced design solutions.

INDUSTRIAL PRODUCT DISTRIBUTION

Selection of power transmission and industrial essentials including bearings, seals, belts, chains, and motors, backed by expert support.

PROCESS EFFICIENCY

Advanced system diagnosis including ultrasonic leak detection, machine efficiency assessments, and problem resolution.

INVENTORY READINESS

Inspection and certification services to ensure stored equipment is always ready for deployment.

MATERIAL HANDLING

Innovative products and tailored design solutions for efficient material handling.

MACHINE CONDITION MONITORING

VibePro suite uses state-of-the-art technology for comprehensive machine health monitoring.

PRODUCTION PROCESS MONITORING

OptiPro uses innovative solutions for optimizing industrial processes and operations.
